

# New, Anti-Bacterial MelaWood®

## Because just looking clean isn't enough.

Of course, PG Bison MelaWood® always looks great and it's 100% closed melamine-resin surface already provides an excellent impervious barrier. But PG Bison now gives you a deeper level of protection.

Because now, a special anti-bacterial additive is blended into our locally manufactured melamine resin, destroying bacteria, that may come to rest on the surface of the MelaWood®, within hours. This additional built-in protective layer makes MelaWood® Anti-Bacterial the perfect solution for hygiene-sensitive, high-traffic areas where cleanliness alone is insufficient, such as healthcare facilities, office spaces, schools, restaurants, retail and even at home.

### IT'S NOT ON TOP, IT'S INSIDE.

Our anti-bacterial additive is introduced during production, so it's integral to the finished product and not just a surface coating, making it extremely effective. It inhibits the microbial growth of bacteria, especially when compared to porous substrates such as wood or stone. Naturally the melamine surface must still be kept clean with standard soap cleaners or alcohol-based disinfectants.

### DEEP CLEAN. PERFECTLY SAFE.

PG Bison's MelaWood® Anti-Bacterial additive is not based on biocide-technology, so it does not pose a risk to humans and is food safe. It also allows for the safe disposal of redundant furniture at a later stage.

MelaWood® Anti-Bacterial	
Fulfils the requirements of ISO 22196*	✓
Especially effective against Staphylococcus aureus and Escherichia coli.	✓

\*Measurement of antibacterial activity on plastic surfaces and other non-porous surfaces
